NTLA-2001 for ATTR Amyloidosis: Interim Clinical Results from Ongoing Phase 1 Trial

Bill, living with transthyretin amyloidosis, and his wife, Maura

Intellia THERAPEUTICS

June 24, 2022

Intellia Therapeutics' Legal Disclaimer

This presentation contains "forward-looking statements" of Intellia Therapeutics, Inc. ("Intellia", "we" or "our") within the meaning of the Private Securities Litigation Reform Act of 1995. These forward-looking statements include, but are not limited to, express or implied statements regarding Intellia's beliefs and expectations regarding the safety, efficacy and advancement of our clinical program for NTLA-2001 for the treatment of transthyretin amyloidosis, including the expected timing of data releases, regulatory filings, and the initiation and completion of clinical trials; our ability to successfully secure additional clinical study authorizations, such as investigational new drug applications ("IND") and clinical trial applications ("CTA"); our belief that NTLA-2001 can be approved as a single-dose therapy, that it can halt and reverse ATTR progression or that it leads to deep, durable serum TTR reduction; our plans to present data at upcoming scientific conferences; the advancement, expansion and acceleration of our CRISPR/Cas9 technology and *in vivo* pipeline to develop breakthrough genome editing treatments for people living with severe diseases; ability to demonstrate and leverage our platform's modularity to advance a pipeline of CRISPR-based investigational therapies across a variety of indications and replicate or apply results achieved in preclinical or clinical studies, including those in our ATTR program, in any future studies; our ability to optimize the impact of our collaborations on our development programs, including but not limited to our collaboration with Regeneron Pharmaceuticals, Inc. ("Regeneron"); statements regarding the timing of regulatory filings and clinical trial execution, including dosing of patients, regarding our development programs; and potential commercial opportunities, including value and market, for our product candidates.

Any forward-looking statements in this presentation are based on management's current expectations and beliefs of future events, and are subject to a number of risks and uncertainties that could cause actual results to differ materially and adversely from those set forth in or implied by such forward-looking statements. These risks and uncertainties include, but are not limited to: risks related to our ability to protect and maintain our intellectual property position; risks related to our relationship with third parties, including our licensors and licensees; risks related to the ability of our licensors to protect and maintain their intellectual property position; uncertainties related to regulatory agencies' evaluation of regulatory filings and other information related to our product candidates; uncertainties related to the authorization, initiation and conduct of studies and other development requirements for our product candidates; risks related to the development and/or commercialization of any of Intellia's or its collaborators' product candidates, including that they may not be successfully developed and commercialized; risks related to the results of preclinical studies or clinical studies, including that they may not be positive or predictive of future results in connection with future studies; and the risk that our collaborations with Regeneron or our other collaborations will not continue or will not be successful. For a discussion of these and other risks and uncertainties, and other important factors, any of which could cause Intellia's actual results to differ from those contained in the forward-looking statements, see the section entitled "Risk Factors" in Intellia's most recent annual report on Form 10-K as well as discussions of potential risks, uncertainties, and other important factors in Intellia's other filings with the Securities and Exchange Commission ("SEC"). All information in this presentation is as of the date of the release, and Intellia undertakes no duty to update this information unless required by law.

Intellia THERAPEUTICS

Agenda

Welcome

Introduction

John Leonard, M.D.
Chief Executive Officer, Intellia Therapeutics

NTLA-2001 Interim Clinical Data Review

David Lebwohl, M.D.
Chief Medical Officer, Intellia Therapeutics

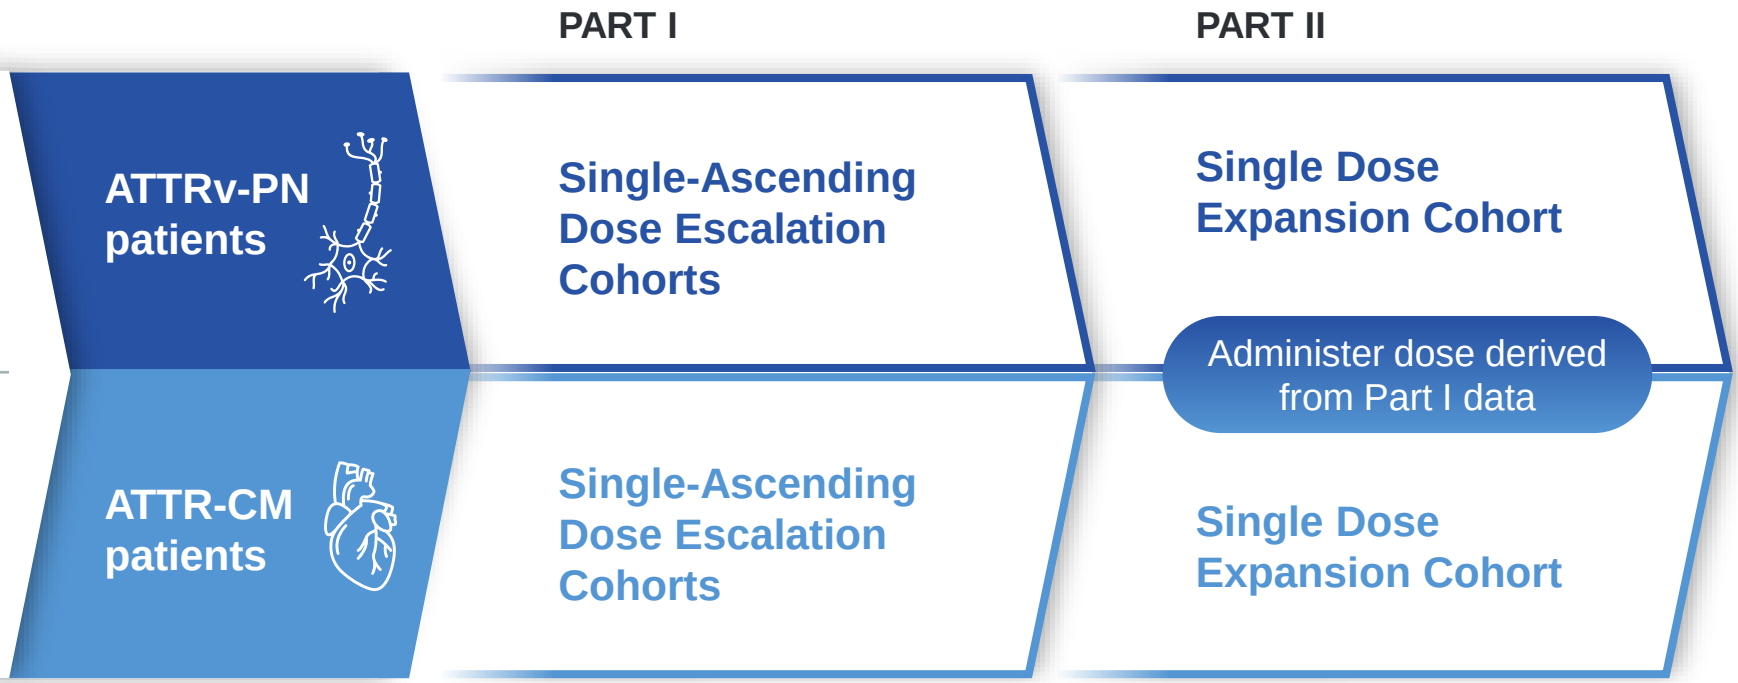
Closing Remarks and Q&A Session

Intellia THERAPEUTICS

NTLA-2001 Expanded Phase 1 Study

Two-part, open-label, multi-center study in adults with hereditary ATTR with polyneuropathy (ATTRv-PN) or ATTR amyloidosis with cardiomyopathy (ATTR-CM)

Intervention:
Single dose administered via an intravenous (IV) infusion

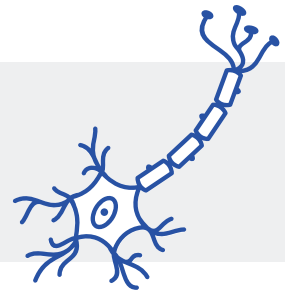


Clinicaltrials.gov ID: NCT04601051

REGENERON Intellia THERAPEUTICS

NTLA-2001 Phase 1 Study: Polyneuropathy Arm

Hereditary transthyretin amyloidosis with polyneuropathy (ATTRv-PN)



Intervention:
Single dose administered via an intravenous (IV) infusion

PART I – DOSING COMPLETE
Single-Ascending Dose

- 1.0 mg/kg (n=6)
- 0.7 mg/kg (n=3)
- 0.3 mg/kg (n=3)
- 0.1 mg/kg (n=3)

PART II – ONGOING
Single Dose Expansion Cohort

N = 8 subjects
Administer 80 mg fixed dose

PRIMARY OBJECTIVES

Evaluate safety, tolerability, PK and PD

- *Measure serum TTR levels*

SECONDARY OBJECTIVES

Evaluate efficacy on clinical measures of neurologic function

- *Neuropathic impairment endpoints include NIS (Part 1 and 2) and mNIS+7 (Part 2 only)*

Clinicaltrials.gov ID: NCT04601051

NIS: Neuropathy Impairment Score **mNIS+7:** modified NIS+7 **PK:** Pharmacokinetics **PD:** Pharmacodynamics

REGENERON Intellia THERAPEUTICS

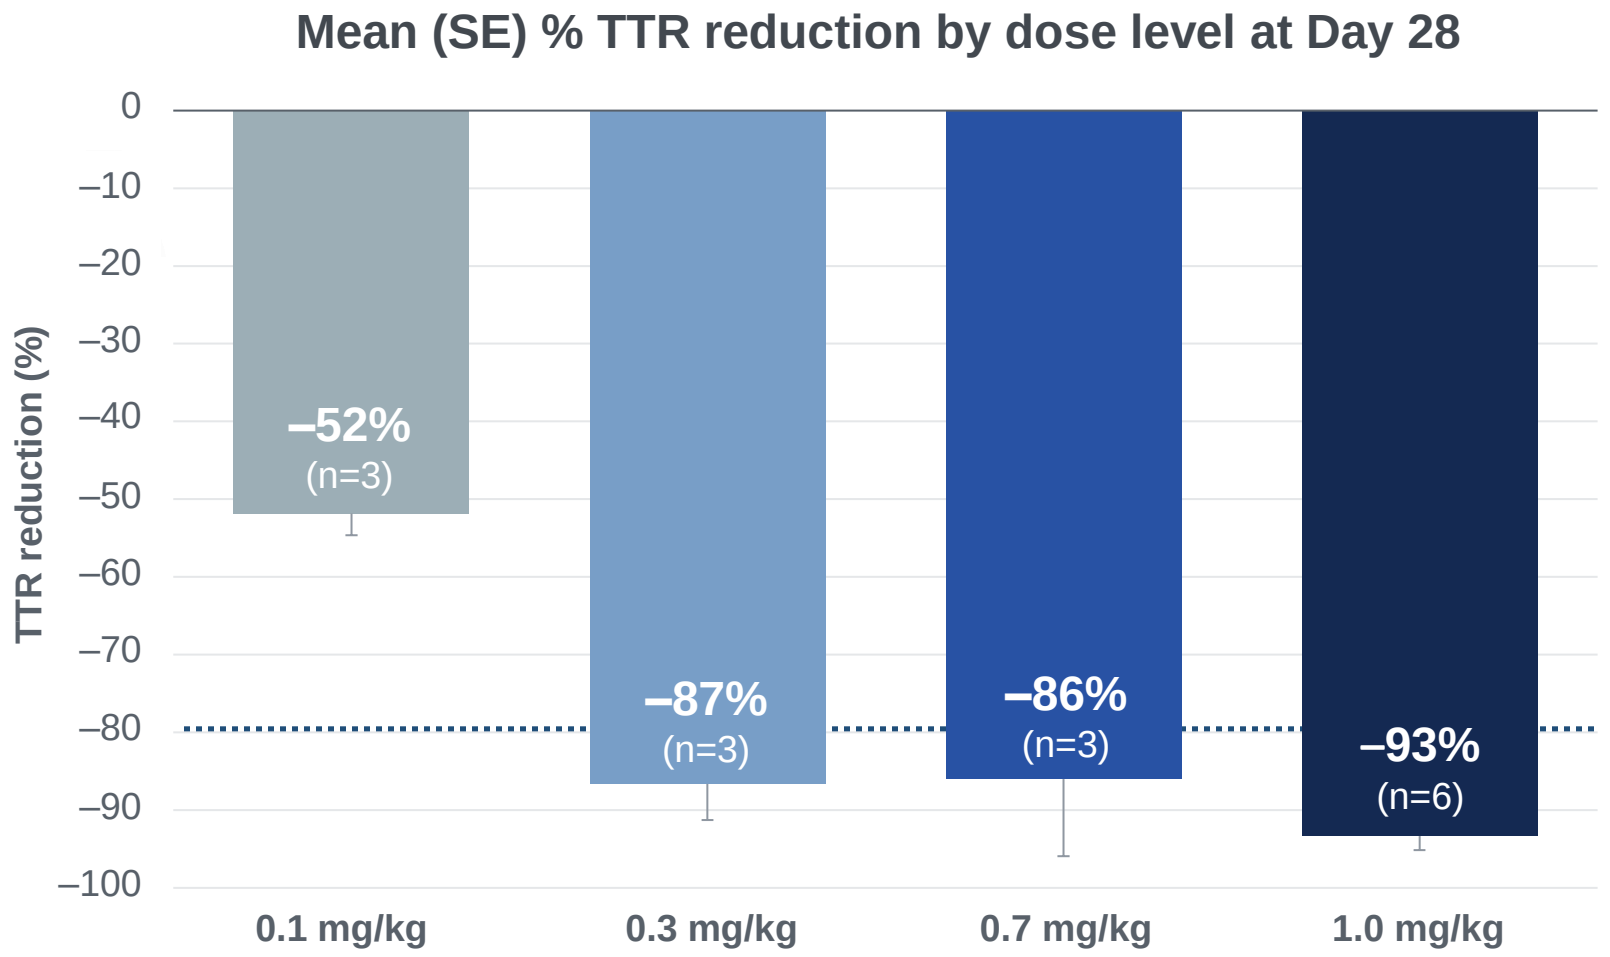
NTLA-2001 Was Generally Well Tolerated Across All Dose Levels Through The Follow-up Period

- **Across all dose levels, the most frequent adverse events* were headache, infusion-related reactions, back pain, rash† and nausea**
  - Majority of adverse events were mild in severity with 73% (n=11) of patients reporting a maximal adverse event severity of Grade 1
  - All infusion-related reactions were considered mild, resolving without clinical sequelae
  - All patients received a complete study dose of NTLA-2001
- **A single possibly-related Grade 3 event (SAE) of vomiting was reported at the 1.0 mg/kg dose in a patient with underlying gastroparesis**
  - 1.0 mg/kg dose level expanded per protocol to 6 patients to further characterize safety and PD
- **No clinically significant laboratory findings observed**
  - Transient Grade 1 liver enzyme elevations observed
- **Maximally tolerated dose was not reached**

Data Cut Off: May 16, 2022
Median follow-up for all subjects is 10 months
* Related and unrelated events in more than 2 patients
† Date of onset D6–D145; all mild in severity
PD, pharmacodynamics; SAE, serious adverse event
This slide includes data for investigational products not yet approved by regulatory authorities

REGENERON Intellia THERAPEUTICS

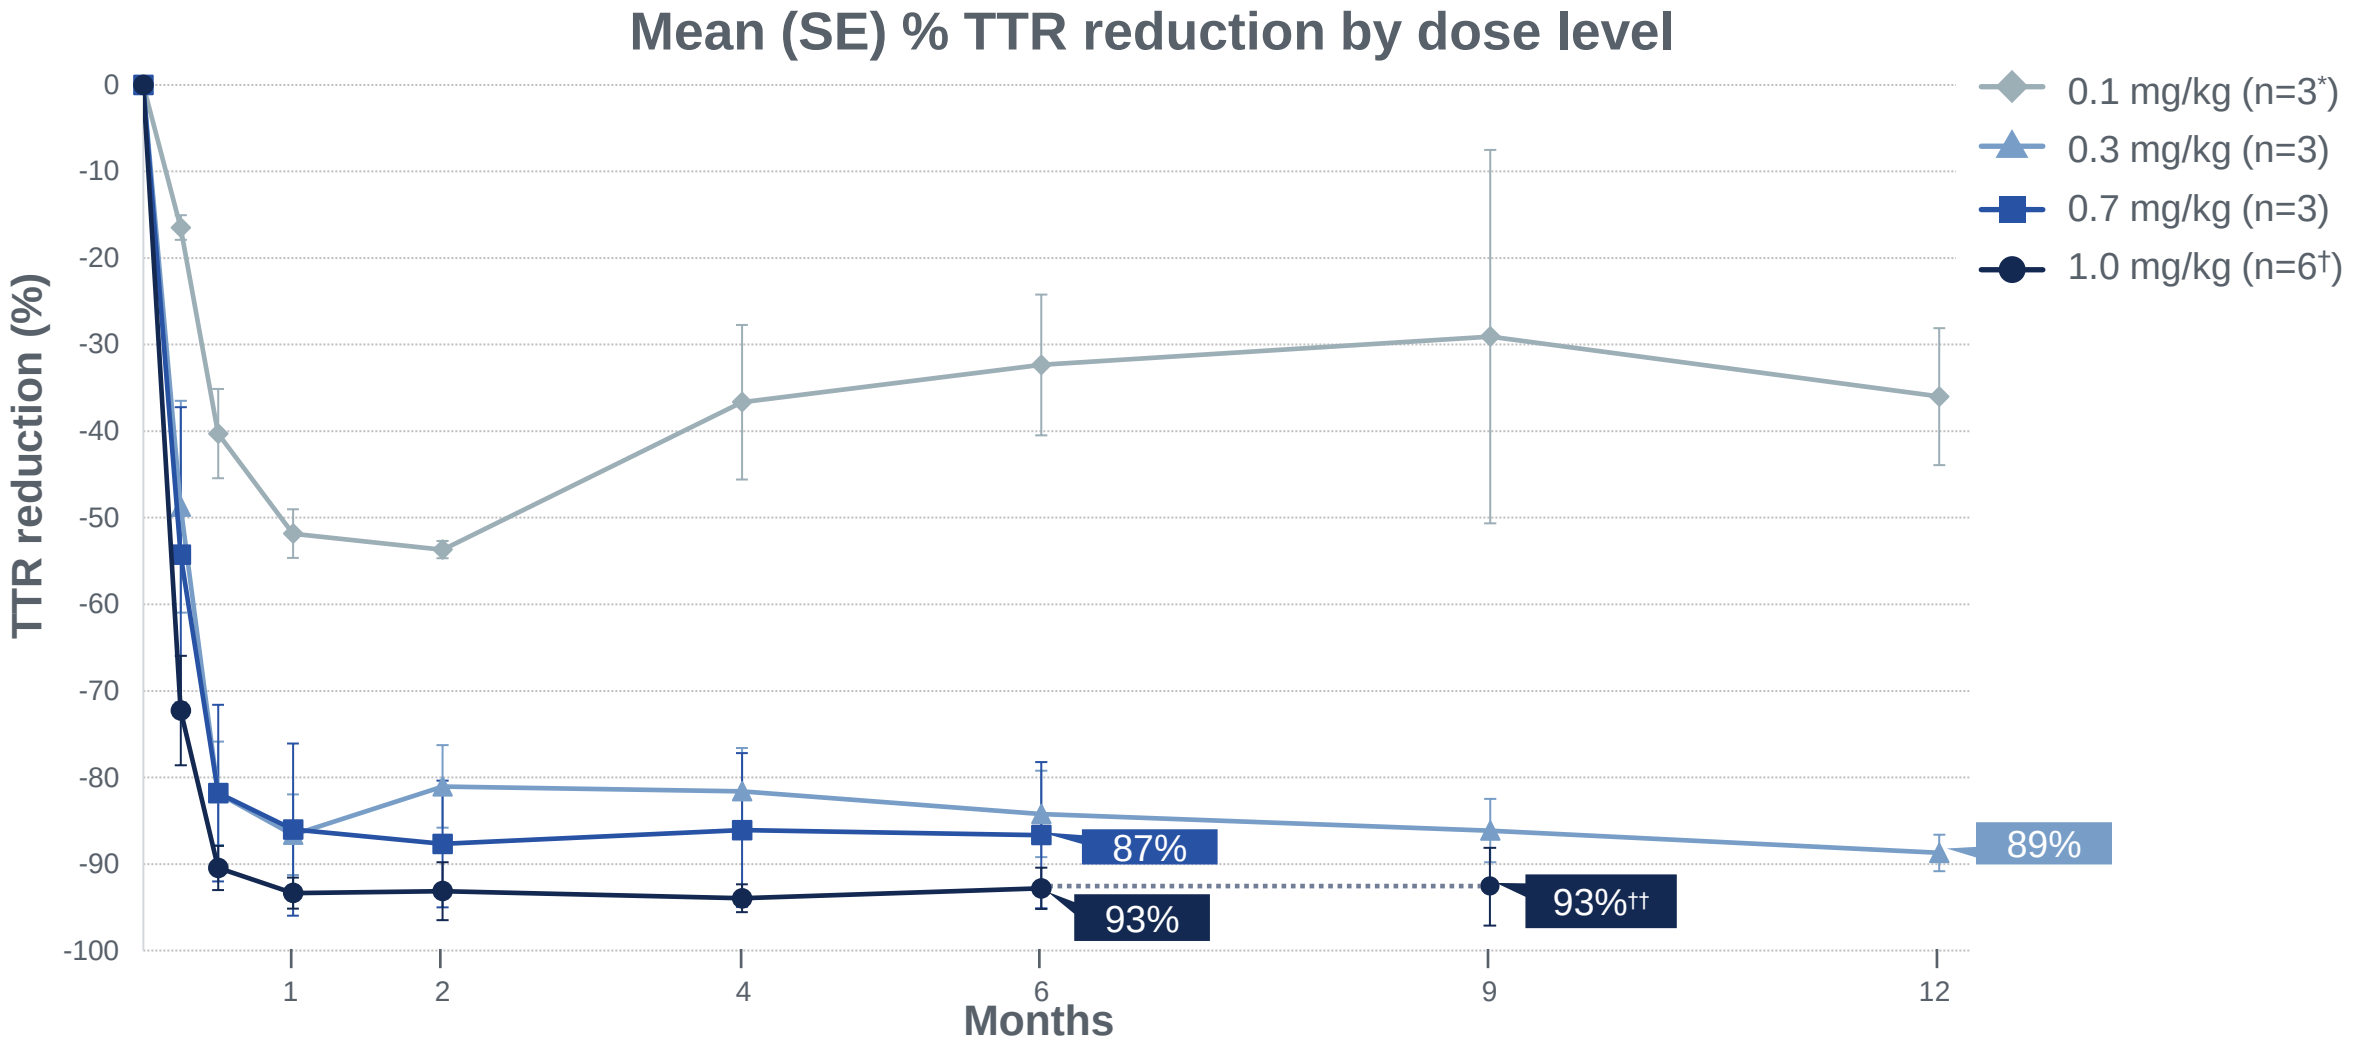
Dose-dependent Reductions in Serum TTR, Reaching a Mean Reduction of 93% at 1.0 mg/kg



Dashed line represents the targeted minimum reduction
SE, standard error; TTR, transthyretin
This slide includes data for investigational products not yet approved by regulatory authorities

REGENERON Intellia THERAPEUTICS

Higher Doses Demonstrated Rapid and Deep Serum TTR Reduction Sustained Through 6-12 Months

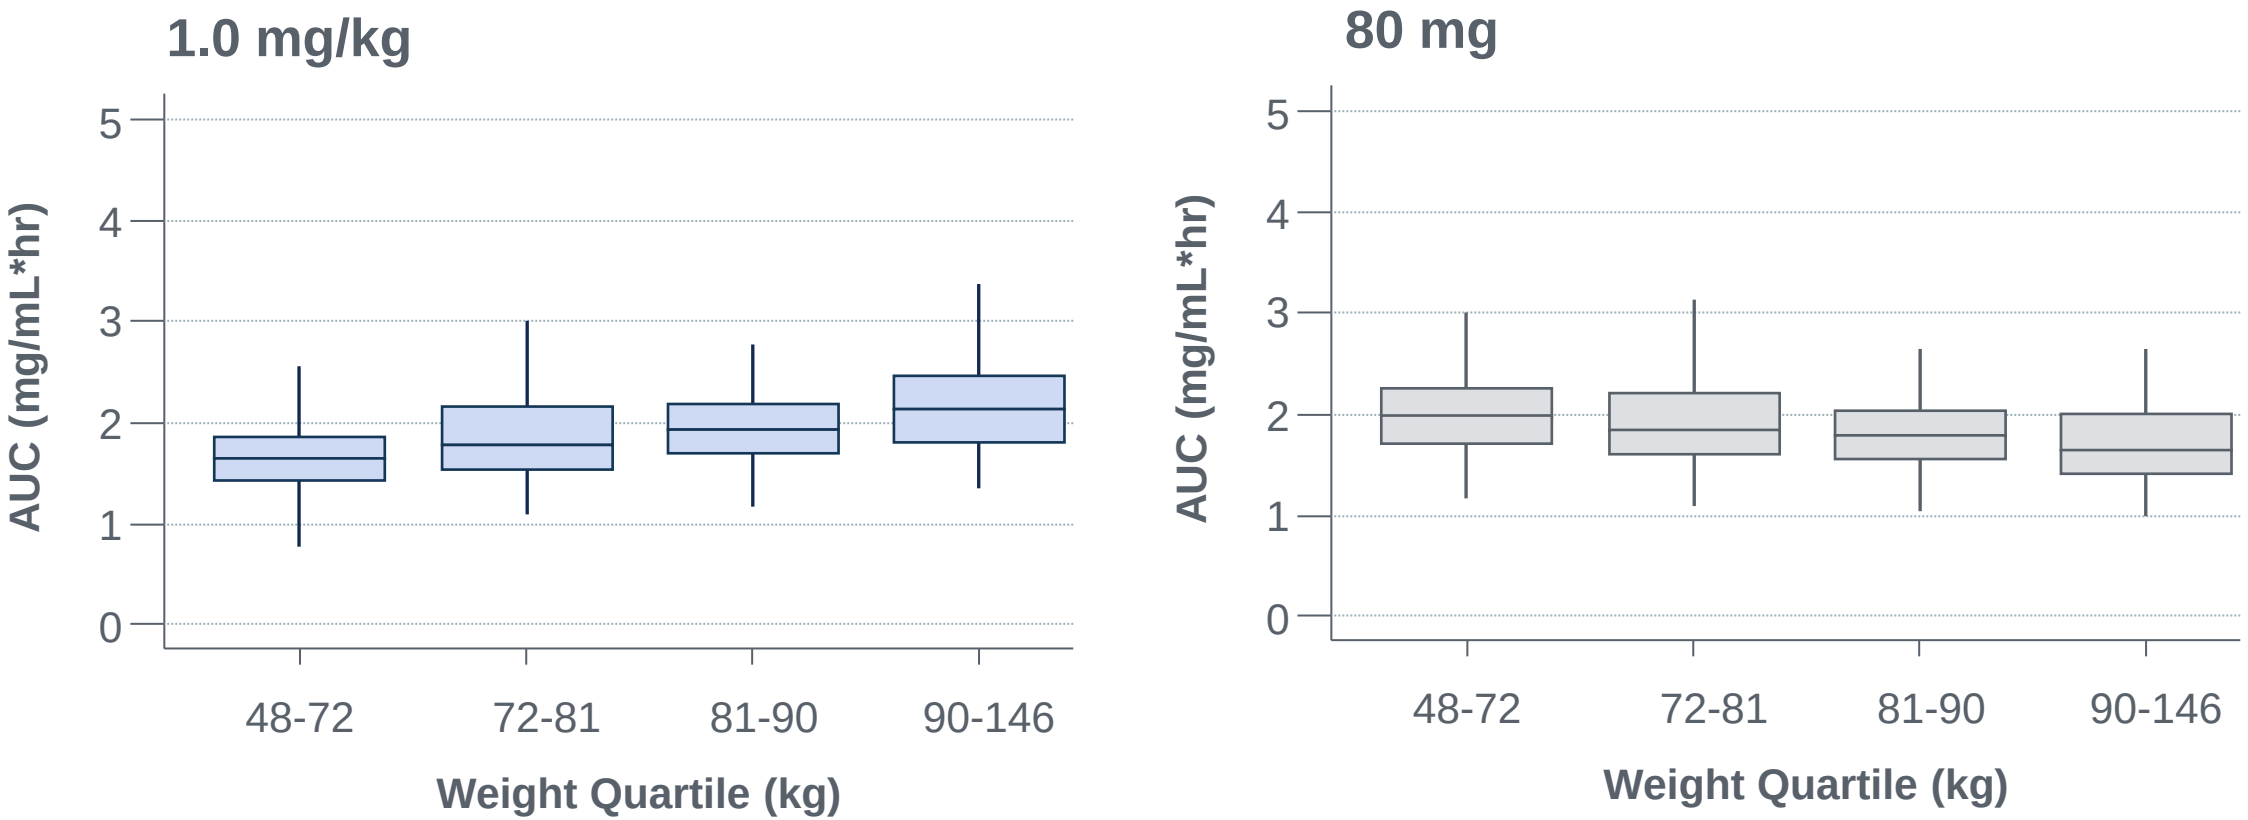


* n=2 at Month 2 (missed visit due to Covid-19 travel restrictions)
† n=5 at Month 2 (missed visit due to Covid-19 travel restrictions)
†† n=3 have reached Month 9 follow-up
SE, standard error; TTR, transthyretin
This slide includes data for investigational products not yet approved by regulatory authorities

REGENERON Intellia THERAPEUTICS

Simulations Identified NTLA-2001 80mg as the Fixed Dose Equivalent to 1.0 mg/kg

Model-predicted distribution of NTLA-2001 AUC (mg*h/mL) following 1.0 mg/kg and 80 mg by indicated weight quartile



Interim model
This slide includes data for investigational products not yet approved by regulatory authorities

REGENERON Intellia THERAPEUTICS

Deep, Consistent, and Durable TTR Reductions Following Single Administration of *in vivo* CRISPR-based Gene Editing

- Mean TTR reduction sustained at all doses tested through 6-12 months
- At 1.0 mg/kg, mean reduction of 93% at day 28 was sustained through 6 months
- NTLA-2001 was generally well tolerated: the majority of adverse events were mild
- No clinically significant laboratory findings observed
- A fixed dose of 80 mg, the fixed dose equivalent of 1.0 mg/kg, has been selected for evaluation in Part II (ongoing)

These data further support and extend early findings from this pioneering trial demonstrating the promise of CRISPR-based *in vivo* gene editing in humans

REGENERON Intellia THERAPEUTICS

Intellia is Opening a New Era of Medicine

KEY TAKEAWAYS

Growing body of evidence **NTLA-2001 could be a potential single-dose treatment for ATTR amyloidosis** that leads to deep, durable serum TTR reduction based on initial safety and activity data

Plan to **leverage modular platform** to advance a pipeline of CRISPR-based investigational therapies across a variety of indications

Intellia is at the **forefront of genome editing** and is the reference company across the industry for its scientific innovation

NEXT STEPS

- Complete enrollment of Phase 1 study of NTLA-2001 for both ATTRv-PN and ATTR-CM in 2022
- Present interim clinical data from cardiomyopathy arm in 2022
- Engage with regulatory agencies, including U.S. FDA, to discuss a potential pivotal trial design
